Introducing the Keras Sequential API on Vertex AI Platform

1 hour Free

Overview

Duration is 1 min

In this lab, you will see how to build a simple deep neural network model using the Keras Sequential API and Feature Columns.

Once you have trained your model, you will deploy it using Vertex AI and see how to call the model for online prediction.

What you learn

In this lab, you will:

- Build a DNN model using the Keras Sequential API.
- Learn how to use feature columns in a Keras model.
- Learn how to train a model with Keras.
- Learn how to save/load, and deploy a Keras model on GCP.
- Learn how to deploy and make predictions with the Keras model.

Setup

For each lab, you get a new Google Cloud project and set of resources for a fixed time at no cost.

1. Sign in to Qwiklabs using an **incognito window**.
2. Note the lab's access time (for example, 1:15:00), and make sure you can finish within that time. There is no pause feature. You can restart if needed, but you have to start at the beginning.
3. When ready, click **Start lab**.
4. Note your lab credentials (**Username** and **Password**). You will use them to sign in to the Google Cloud Console.
5. Click **Open Google Console**.
6. Click **Use another account** and copy/paste credentials for **this** lab into the prompts. If you use other credentials, you'll receive errors or **incur charges**.
7. Accept the terms and skip the recovery resource page.

Note: Do not click **End Lab** unless you have finished the lab or want to restart it. This clears your work and removes the project.

Enable All Recommended API

1. In the Google Cloud Console, on the **Navigation menu**, click **Vertex AI**.
2. Click **Enable All Recommended API**.

Task 1. Launch Vertex AI Notebook instance

1. In the Google Cloud Console, on the **Navigation Menu**, click **Vertex AI > Workbench**. Select **User-Managed Notebooks**.
2. On the Notebook instances page, click **Create Notebook**.
3. In the **Create instance** dialog, confirm the name of the deep learning VM, if you don't want to change the region and zone, leave it to default.
4. Click **Environment**, and select **TensorFlow Enterprise 2.6 (with LTS and Intel MKL-DNN/MKL)** from the dropdown.
5. Click **Machine type**, and select **E2 standard > e2-standard-2**.
6. Leave all settings as they are and then click **Create**. The new VM will take 2-3 minutes to start.
7. Click **Open JupyterLab**.
A JupyterLab window will open in a new tab.

Task 2. Clone course repo within your Vertex AI Notebook instance

To clone the training-data-analyst notebook in your JupyterLab instance:

1. In JupyterLab, to open a new terminal, click the **Terminal** icon.
2. At the command-line prompt, run the following command:

```
git clone https://github.com/GoogleCloudPlatform/training-data-analyst
```

3. To confirm that you have cloned the repository, double-click on the training-data-analyst directory and ensure that you can see its contents.
The files for all the Jupyter notebook-based labs throughout this course are available in this directory.

Task 3. Keras Sequential API

Duration is 45 min

1. In the notebook interface, navigate to **training-data-analyst > courses > machine_learning > deeplive2 > introduction_to_tensorflow > labs** and open **3_keras_sequential_api.ipynb**.
2. In the notebook interface, click on **Edit > Clear All Outputs** (click on Edit, then in the drop-down menu, select Clear All Outputs).
3. Carefully read through the notebook instructions and fill in lines marked with **#TODO** where you need to complete the code as needed.

Tip: To run the current cell you can click the cell and hit **shift+enter**. Other cell commands are found in the notebook UI under **Run**.

- Hints may also be provided for the tasks to guide you along. Highlight the text to read the hints (they are in white text).
- If you need more help, you may take a look at the complete solution by navigating to **training-data-analyst > courses > machine_learning > deepdive2 > introduction_to_tensorflow > solutions** and open **3_keras_sequential_api.ipynb**.

End your lab

When you have completed your lab, click **End Lab**. Qwiklabs removes the resources you've used and cleans the account for you.

You will be given an opportunity to rate the lab experience. Select the applicable number of stars, type a comment, and then click **Submit**.

The number of stars indicates the following:

- 1 star = Very dissatisfied
- 2 stars = Dissatisfied
- 3 stars = Neutral
- 4 stars = Satisfied
- 5 stars = Very satisfied

You can close the dialog box if you don't want to provide feedback.

For feedback, suggestions, or corrections, please use the **Support** tab.
